

A Host of Advantages

Double safety

Compared to other products that have just 1 thread rod and a very small clamp, the Aardwolf Temporary Roof Post has the possibility to make a rough adjustment fixed with the splint pins; and finally one can tighten 4 screws for fine adjustment.

Even if the user makes any mistake he still has a double safety factor because of high ground stability and double thread rod of the Roof Post

A trained user can fix the equipment by himself in approximately 45 seconds.

Falling height

Unlike some products that deform by upto 1.5m in case of a fall, the Aardwolf Roof Post bends only 2-3 cm depending on the hardness of a fall (fall factor).

This reduces the free fall and hence the level of hard injuries.

Adjustment range

The Aardwolf Roof Post has a wide adjustment range for nearly all steel beams.
